PROJECTS

• Uniride – College Ride-Sharing Web App

Built a Flask-MySQL ride-sharing app for college students with user auth, ride creation, seat-based requestmatching, and role-based access. Designed relational schemas with constraints to ensure valid participation.

• Connect 4 Game Using AI

Developed a Python-based Connect 4 game featuring an AI opponent powered by the Minimax algorithm with Alpha-Beta pruning. Designed a heuristic evaluation function to assess board states using winning patterns, center control, and opponent blocking. Implemented an interactive graphical interface using Pygame for smooth human vs AI gameplay.

• Autocomplete System Using Trie in C

Developed an autocomplete system in C using Trie to suggest words and phrases based on user input. Supported extended ASCII characters and limited output to 10 matches for usability. Loaded data from files and managed memory dynamically.

ACHIEVEMENTS

• Editorial Team Member :

Edited and contributed content, including the annual placement report. Collaborated with team members to curate, proofread, and finalize articles. Ensured clarity, accuracy, and timely publication.
